

Expert grid consultancy, accelerating your grid connections.

Electricity Connections. Simplified.

Less jargon. More action. Smoother connections.

Whether you're in the initial stages of applying for a grid connection or you're further along the road, the process can be complex, time-consuming, and costly.

We're here to help every step of the way with expert advice from some of the industry's most experienced consultants. All working to make it easier for you to connect to the grid quickly and cost-effectively.

Easy does it

Connecting to the grid is an integral component of a project's success. We provide the relevant expertise you need to do this successfully. Eclipse Power Solutions is here to help you to find the best outcome for your project, based on our unbiased advice.

- **Collaborate.** Sound advice and collaborative working with friendly experts
- **Innovate.** Innovative solutions that translate into success
- **Progress.** Reassuringly experienced people to help you progress your project
- **Accelerate.** Help to find the quickest way to connect

Part of the Eclipse Power Group

We're part of the Eclipse Power Group. So, when you talk to us, you're talking to a small team of highly experienced experts in the field of grid connections, backed by big company resources.

Friendly experts who get things done

Dealing with us is like hiring your own grid manager to liaise with the relevant Network Operator, both at Distribution and Transmission.

Solutions for every stage of your project

1. Pre-application Stage

Before you apply for a grid connection, we'll help you to assess and analyse the viability of your project so that you can progress confidently. Services include a review of the capacity at your site for grid connectivity, as well as any commercial considerations. In addition we can liaise with the relevant Network Operator on your behalf.

2. Grid Application Stage

You can count on us for expert advice and support in the preparation of your application. We'll review your application in detail before it is submitted. To help us, we use industry-leading software and processes, which cover all voltage levels for both distribution and transmission.

3. Grid Offer Stage

Our expert appraisal service enables you to identify and rectify any potential risks or errors within your Grid Offer. This means you can be sure that you are deploying the solution that best suits your project.

4. Pre-construction Stage

Before you accept a connection offer from the Network Operator, or a quote from an Independent Connection Provider (ICP), we will review it for you to ensure you're getting the best engineering solution. In addition, we will help you to manage contracts before construction begins.

Let's talk

At Eclipse Power Solutions, we have all the expert consultancy you need to make the grid connection process as smooth as possible. All backed by the in-depth technical and operational resources of our group associates in Eclipse Power Networks, an Independent Distribution Network Operator (IDNO).

Whatever your grid connection project, the first step is to **get in touch**.
